OpenObject offers you in a single package the core component for building a business application:

- Object Relational Mapping: this layer simplifies the database access.
- Permission system: complete permission system covering, menus, fields, data access, business actions.
- Multi-language / internationalisation: Unicode UTF-8, multiple languages per database (language switching), temporal data stored in UTC.
- Translatable fields: database text fields can be marked as translatable. For example a product name can have the following names in English and French "car, voiture".
- Reporting engine: OpenObject incorporates a reporting engine with PDF generation.
- Web services: OpenObject offers its services via xmlrpc and JSON (Javascript).
- Without effort, your solution can be linked to the OpenObject document management system.
- OpenObject also incorporates a complete E-mail integration engine.
- OpenObject provides a built-in application framework for tests.
